The present sequence is derived from the 5' end of the genomic RNA of Reticuloendotheliosis virus type A (REV-A). The specification also describes nucleotide sequence derived from all or part of the 5' end of the genomic RNA of a type C retrovirus other than Friend murine leukaemia virus (FMLV) and Moloney murine leukaemia virus (MoMLV). The 5' derived sequences are used as an internal ribosome entry site (IRES) in a vector for permitting or enhancing the encapsidation of a retrovirus vector. The vectors can be used for gene therapy, production of recombinant polypeptides or production of transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28-APR-1997; 005203.

```
Recombinant retrovirus vector, contg. non-retroviral gene, - has ability to produce progeny virus, in helper cell which can infect host cell and form provirus

Example: Page 17: 28pp; English.

The universal retroviral vector pPoll5-R1 (given in Q76041) was obtained by replacing the SV40 promoter and hpt gene of pPOll1-R1 (Q76038) with the multiple cloning site of pBluescript II KS. The vectors allow cell-type specific gene expression and eliminate ris of downstream activation of cellular proto-oncogenes.

                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a recombinant fowlpox virus (FPV) whose nucleic acid does not encode an active reticuloendotheliosis virus (REV), and whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens older than 1 day can be vaccinated with the vaccine subsequent to vaccination with FPV M (FPV mild strain) at 1 day of age. Prior vaccine and field strains of FPV carry integrated REV sequences. Some of the FPV strains carry a near full length provitus of REV sequences. Some of the FPV strains carry when transfected into cell cultures and when chickens are infected. The present invention provides the means by which a FPV vaccine free from contamination by REV may be produced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ğ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC contamination by Exp many sequences. Some of the FPV strains carry a near full length provides the means by which a FPV vaccine free from contamination by REV sequence. So sequence as a FPV LISURURE CONTAMINATION of REV. Sequence. The recombinant FPV is contained and sequence of the produce a vaccine against fowlpox virus. The vaccine is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens older than 1 day can be vaccine to vaccinated with the vaccine subsequent to vaccination with constrain at 1 day of age. Prior vaccine and field strains at 1 day of age. Prior vaccine and field strains carry a near full length provirus of REV, and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The present invention provides the means by which a FPV vaccine free from contamination by REV may be produced. Sequences X26110-115 represent FPV long terminal repeat sequences. The new recombinant FPV nucleic acid molecule can comprise a FPV LTR sequence selected from the above.

                                                                                                                                                                                                                                                                                                                                                                                r Recombinant retrovirus vector, contg. non-retroviral gene, - has ability to produce progeny virus, in helper cell which can infect r host.cell and form provirus sexample; Page 13-14; 28pp; English.

New recombination-free, highly efficient retroviral vectors peolil-R1 (given in Q76038), peolil-R2 (Q76039) and peolil-R3 (Q76040) were obtained by replacing the U3 region of the left LTR of spleen necrosis virus with the IE promoter/enhancer of CMV and extension of the encapsidation region. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.

                                                                                                                                                                                                                                     ability to produce progeny virus, in helper cell which can infost cell and form provirus

Example; Page 14-16; 28p; English.

New recombination-free, highly efficient retroviral vectors
pPO111-R1 (given in Q76038), pp0111-R2 (Q76039) and pp0111-R3 (Q76040) were obtained by replacing the U3 region of the left
LTR of spleen necrosis virus with the IE promoter/enhancer of and extension of the encapsidation region. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.

FOWIPOX virus (FPV S3') LTR sequence.
FOWIPOX virus; FPV; recombinant; reticuloendotheliosis virus;
vaccine; chicken; LTR; long terminal repeat; ss.
                                                                                                                                                                                                                                                                                                     1150
occurrence in chickens; claim 18; Fig 5; 127pp; English. Claim 18; Fig 5; 127pp; English. The invention relates to a recombinant fowlpox virus (FPV) whose nucleic acid does not encode an active reticuloendotheliosis virus (RBV), and whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be

OL COLORD SERVICE SERV
PT occurrence in chickens

Staim 18; Fig 6; 127pp; English.

CC The invention relates to a recombinant fowlpox virus (FPV) whose nucleic acid does not encode an active reticuloendotheliosis virus (REV), and to whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be contained at older than 1 day of age. Alternatively, chickens older than 1 day of age. Alternatively, chickens older than 1 day of age. Prior vaccination with the vaccinated with the vaccine subsequent to vaccination with the province of FPV M (FPV mild strain) at 1 day of age. Prior vaccine and field strains come of FPV carry integrated REV sequences. Some of the FPV strains carry a come trull length provirus of REV, and can give rise to infected. The containation by REV may be produced. Sequences are infected. The containation by REV may be produced. Sequences x26110-115 represent FPV conjugated to the containation by REV may be produced. Sequences x26110-115 represent FPV conjugated contains a first sequences. The new recombinant FPV nucleic acid conjugated co

Alternatively, chickens older tha 1 day can be vaccinated with the vaccine subsequent to vaccination with FPV M (FPV mild strain) at 1 day of age. Prior vaccine and field strains of FPV carry integrated REV sequences. Some of the FPV strains carry a near full length provirus of REV, and can give rise to infectious REV when transfected into cell cultures and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The present invention provides the means by which a FPV vaccine free from contamination by REV may be produced. Sequences x56110-115 represent FPV long terminal repeat sequences. The new recombinant FPV nucleic acid molecule can comprise a FPV LTR sequence selected from the above. Sequence 296 BP; 75 A; 58 C; 81 G; 82 T;

Statum 18; Fig 5; 127pp; English.

CC The invention relates to a recombinant fowlpox virus (FPV) whose nucleic acid does not encode an active reticuloendotheliosis virus (REV), and CC whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to compare the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens older than 1 day of age. Alternatively, chickens older than 1 day of age. Prior vaccine and field strains car y and the vaccine subsequent to vaccination with the vaccine subsequent to vaccination with the vaccine for vaccine and field strains carry a compared to the province of REV, and can give rise to infectious REV when transfected into cell cultures and when chickens are infected. The contamination by REV may be produced. Sequences x26110-115 represent FPV contamination by REV may be produced. Sequences x26110-115 represent FPV contamination by REV may be produced. Sequences x26110-115 represent FPV contamination by REV may be produced. Sequences x26110-115 represent FPV contamination by REV may be produced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a recombinant fowlpox virus (FPV) whose nucleic caid does not encode an active reticuloendotheliosis virus (REV), and CC whose genome does not contain any REV sequence. The recombinant FPV is CC used to produce a vaccine against fowlpox virus. The vaccine is used to produce a vaccine against fowlpox virus. The vaccine is used to cC prevent the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens older than CC 1 day can be vaccinated with the vaccine subsequent to vaccination with CC 1 day can be vaccinated with the vaccine subsequent to vaccination with CC of FPV mild strain) at 1 day of age. Prior vaccine and field strains CC of FPV carry integrated REV sequences. Some of the FPV strains carry a near full length provirus of REV, and can give rise to infectious REV CC when transfected into cell cultures and when chickens are infected. The CC contamination by REV may be produced. Sequences x26110-115 represent FPV clong terminal repeat sequences. The new recombinant FPV nucleic acid molecule can comprise a FPV LTR sequence selected from the above.

New isolated nucleic acid encoding plant ADA2 transcription activator - used for regulating expression of genes in plants and to pr activator - used for regulating expression of genes in plants and to present screen for specific inhibitors, potentially useful as herbicides claim 2; page 26-28; 40pp; English.

Claim 2; page 26-28; 40pp; English.

CC price present sequence encodes the ADA2 transcription adapter isolated crown phaseolus lunatus. Also described are chimeric genes comprising compensor that the expression operably linked to suitable regulatory the ADA2 nucleic acid sequence operably linked to suitable regulatory comparticularly to reduce expression of particular genes can be used: (i) to compare the expression of particular genes whose promoters care normally regulated by ADA2, using antisense or co-suppression compared by factors with which ADA2 interact; and (ii) to compounds that inhibit ADA2, potentially useful as herbicides. Fragments of the ADA2 nucleic acid sequence (or synthetic primers based on it) are used in hybridisation screens to obtain sequences encoding homologous sequences from other plant genomic libraries, also for mutant phenotypes.

Pr Polynucleotide(s) and proteins derived from Staphylococcus aureus - Pr stored on computer readable medium and used in the production of Pr anti-S.aureus vaccines
PS Claim 1: Page 1025-1028; 3271pp; English.
CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences
CC of the invention. The DNA sequences are recorded on a computer readable
CC medium, preferably selected from a floppy or hard disk, random access
CC that protein-encoding or regulatory regions of commercial, therapeutic or
CC that protein-encoding or regulatory regions of commercial, therapeutic or
CC that protein-encoding or regulatory regions of commercial, therapeutic or
CC likely to encode antigens have been identified and these polypeptides can
CC be used in a vaccine composition against S.aureus infection. The
CC saureus in a sample. S.aureus is implicated in numcrous human diseases,
CC skin and surgical wound infections, scalded skin syndrome, toxic shock
CC skin and surgical wound infections, scalded skin syndrome, toxic shock
CC syndrome, etc. Organisms transformed with the DNA sequences can be used
CC computer readable medium.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
  nucleic search, using sw model

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP brosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo. NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ΒP
